

Reid Me First.

The installation of this software is pretty straightforward simply install the file provided.

File Name: **Setup-KarateTS.EXE** this is the file for the full version.

File Name: **Setup-KarateTS-Demo.EXE** this is the file for the **Demo version**.

1. Start the process of the installation by running the Setup-KarateTS.EXE file or the demo, the installation will ask you to accept the license agreement and pick how do you want to install it. There are two options to install it, one is with Data and the other is with No Data.

If you're planning to use the software for an event and you want to start using it fully, the best idea would be to install it with **No data**.

If you're planning to test the software, play with it or use it so that you could create more knowledge and understanding of how it works, the best way would be to install it **with Data**. The advantages of installing it with data is that you could just pick certain events and competitors without having to go through the whole process of creating the event and registering competitors for each one of the tests or practices that you want to do with the software.

Once you pick which version of the software you want to install click next, it will go through the installation process and at the end click on Finish.

2. The second part would be to register the software with the temporary license provided. This will allow you to run the software for a certain period of time. The License file name is **CiC Zone_KarateTournamentLicencia.xml** and it is located in **c:\KarateTs** folder. This file is required to register the software.

3. Depending on how you installed the software it might prompt you to create a User and Password or not.

If installed with No Data, the first time up it will prompt you to create the User and Password.

If installed with data then you must use the following **User and Password**:

User : Admin

Password: Admin

Once you completed the steps above you should be allowed to use the software for the period of time that the license provides you.

Important Note: **Do NOT Change** the date or time of your computer once you installed the software, doing so will permanently lock down the software and will not allow it to work anymore.

Once this lockdown happens by the security design of the software, it will no longer work even with a brand new key, you will need to wipe and reload your computer in order to get it to work again. For this reason it is very important to not play with the date or time of the computer once the setup is done.

If you downloaded the demo version is very important that you noticed that a few **Buttons Have Been Disable**, these buttons that have been disable are very important for the use of the application but nevertheless having them disable will still allow you to test and play with the most amount of functions of the software, in the case that you understand that the software is exactly what you're looking for, when you order your new license and your new download, you will get a full working version of the software with no buttons disable.

Also, we would highly appreciate that once you start using the software you do your own evaluation and give us feedback. Let us know how we can improve the software to make it more useful for every tournament promoter. Our intention is to provide a system that allows every tournament to be run the most highly professional way that a tournament could be run.
